

Correlation (pearson's r)

Heatmap visualization showing Pearson's correlation coefficients between 120 variables. The color scale ranges from -0.5 (blue) to 1.0 (red). The diagonal represents a correlation of 1.0. The plot is symmetric. Most correlations are low (white/yellow), but there are several strong positive correlations (red) and a few strong negative correlations (blue). Notable strong positive correlations are between 'exp' and 'rent' (row 11, column 119), 'rent' and 'rent' (row 119, column 119), and 'rent' and 'rent' (row 119, column 119). Notable strong negative correlations are between 'rent' and 'rent' (row 119, column 119) and 'rent' and 'rent' (row 119, column 119).

Covariates correlation
